CUMULATIVE CLINICAL GESTATION RATE PER CYCLE. (INCLUDES FRESH TRANSFER PLUS TRANSFER OF FROZEN EMBRYOS GENERATED IN THAT CYCLE).

EGG DONATION CYCLES PROVIDE ENOUGH EMBRYOS TO BE VITRIFIED AND TRANSFERRED IN A SUBSEQUENT CYCLE.

CUMULATIVE SUCCESS RATE ON THE THIRD ATTEMPT.

7.900

EGG DONATION TREATMENTS PER YEAR

Finally, your dream is within reach

Egg donation is an assisted reproduction treatment which will help you become a mother even if you have no eggs or they are not of the necessary quality to produce an embryo. Using the in vitro fertilization technique, in the laboratory, we will fertilize your donor's egg with your partner's sperm or that of another donor to then transfer it to your uterus.

How do we select our donors?

Our donors undergo a rigorous selection process to be included in our programme

Legislation

Healthy women aged from 18-35 years with full capacity to act. Average age of 25.

Medical history

On the first visit, we hold an interview to complete the family and personal history, including a questionnaire about congenital diseases in the family. Our medical team observes the donor's phenotypic characteristics: height, weight, race, build, skin colour, hair colour, hair texture, eye colour...

Psychological assessment

Then the donor talks to a psychologist specializing in mental health to make sure she fully understands the implications of egg donation and she wants to become a donor.

Genetic examination

Carrier screening tests for severe recessive and X-linked childhood illnesses based on NGS (549 genes involved in 623 disease phenotypes).

Medical tests

Later, tests are performed to discover the blood type, Rh factor, full blood count, haemostasis, karyotype, biochemical detection of infectious diseases (such as HIV (HIV 1 + 2), CHV (Hep C Ab), BHV (HBsAg + Ab antiHVC) and syphilis, specific geographic/ethnic related tests: serological: Zika, HTLV, malaria, dengue, CMV...

Gynaecological examination

A full gynaecological examination, an ultrasound and the calculation of the ovarian reserve of each donor.

At IVI, egg donation is performed in accordance with the current EU legislation and follows the strict medical standards and protocols established by the IVI Group. Our egg donation programme follows a strict traceability process.

Opinions about egg donation

* Fictitious photographs to preserve the anonymity of our patients.

I felt very guilty

My fertility was minimal because of early menopause. When I was told I needed a donor, I felt very relieved. IVI makes everything... [\(See +\)](#)

Do you know how the process works?

With Ovodon by IVI, you don't need to worry.

At IVI we are committed to offering the greatest possible safety and efficacy in our treatments for future mothers and donors. Therefore, we guarantee that they receive the best treatment and the highest level of medical care. It is also a dream come true for us to help you.

[Any questions? Let us help you](#)

Our rates correspond to one-embryo transfers, with the aim of minimising the chances of multiple pregnancy and the complications involved.

Benefits of Ovodon

No waiting lists.

We have 4,500 donors available to you. Our egg bank is one of the largest in the world. When you decide to start treatment, you won't have to wait for anything.

Baby most genetically like you.

We have 110 different phenotypes in our donor bank. This means we will select the donor eggs that are the most genetically identical to you.

Higher success rate.

We have more than 52,000 vitrified oocytes. The eggs are selected after a genetic study (GCT) eliminating the risk of transmission of more than 600 diseases.

Guaranteed anonymity.

At IVI we comply with Spanish legislation on assisted human reproduction techniques, which establishes that there can be no link between donor and recipient, meaning every donation will be anonymous and confidential.
